1 PROBLEM

Triangles on the same base (or equal bases) and having equal areas lie between the same parallels.

2 EXPLANATION

Consider $\mathbf{A}, \mathbf{B}, \mathbf{C}$ are three points of a triangle $\triangle ABC$, $\mathbf{D}, \mathbf{B}, \mathbf{C}$ are three points of another triangle $\triangle DBC$, both triangles having same base BC and \mathbf{B} at origin,

$$\mathbf{A} - \mathbf{B} = \mathbf{A} \quad (2.0.1)$$

$$\mathbf{C} - \mathbf{B} = \mathbf{C} \quad (2.0.2)$$

$$\mathbf{D} - \mathbf{B} = \mathbf{D} \quad (2.0.3)$$

The area of the triangle $\triangle ABC$ is,

$$\text{Area}(\triangle ABC) = \frac{1}{2} \|(\mathbf{A} - \mathbf{B}) \times (\mathbf{C} - \mathbf{B})\| \quad (2.0.4)$$

Substituting (2.0.1) and (2.0.2) in (2.0.4),

$$\Rightarrow \text{Area}(\triangle ABC) = \frac{1}{2} \|(\mathbf{A} \times \mathbf{C})\| \quad (2.0.5)$$

The area of the triangle $\triangle DBC$ is,

$$\text{Area}(\triangle DBC) = \frac{1}{2} \|(\mathbf{D} - \mathbf{B}) \times (\mathbf{C} - \mathbf{B})\| \quad (2.0.6)$$

Substituting (2.0.2) and (2.0.3) in (2.0.6),

$$\Rightarrow \text{Area}(\triangle DBC) = \frac{1}{2} \|(\mathbf{D} \times \mathbf{C})\| \quad (2.0.7)$$

Given the area of $\triangle ABC$ is equal to the area $\triangle DBC$, from equations (2.0.5) and (2.0.7)

$$\frac{1}{2} \|(\mathbf{A} \times \mathbf{C})\| = \frac{1}{2} \|(\mathbf{D} \times \mathbf{C})\| \quad (2.0.8)$$

In the above equation (2.0.8), the resultant cross product vectors of L.H.S and R.H.S are parallel. Also, as we assumed $\mathbf{B}=0$. We can write equation (2.0.8) as,

$$\mathbf{B} \times (\mathbf{A} \times \mathbf{C}) = k (\mathbf{B} \times (\mathbf{D} \times \mathbf{C})) \quad (2.0.9)$$

$$\Rightarrow \mathbf{A}(\mathbf{B} \cdot \mathbf{C}) - \mathbf{C}(\mathbf{B} \cdot \mathbf{A}) = k (\mathbf{D}(\mathbf{B} \cdot \mathbf{C}) - \mathbf{C}(\mathbf{B} \cdot \mathbf{D})) \quad (2.0.10)$$

As the dot products results in scalars(constants), we can write the equation (2.0.10) as,

$$(\mathbf{A} - \mathbf{D}) = k_1 (\mathbf{B} - \mathbf{C}) \quad (2.0.11)$$

From the equation (2.0.11), we can say that $AD \parallel BC$. Hence the two triangles $\triangle ABC$ and $\triangle DBC$ lie between the same parallels AD and BC
