1 Problem

Let \mathbb{F} be a subfield of complex numbers and let T be the transformation on $\mathbb{F}(x)$ defined by

$$T\left(\sum_{i=0}^{n} c_i x^i\right) = \sum_{i=0}^{n} \frac{c_i}{i+1} x^{i+1}$$
 (1.0.1)

Show that T is a non-singular linear operator on $\mathbb{F}[x]$. Also show that T is not invertible.

2 Solution

The transformation T does integral of a polynomial. Table 2 provides proof that the transformation T is a linear operator and non-singular. Table 3 provides proof that T is not invertible, however there exists a left inverse. The parameters used in the proof are listed in the table 1.
